

RITHWIK BODIGA

Backend Engineer · Node.js · Java · MongoDB · FinTech Systems & LLM Integration
Hyderabad, India · +91-7675832677 · bodiga.rithwika@gmail.com · [linkedin.com/in/rithwika-bodiga](#) · [github.com/rithwikab](#)
Website: <https://rithwikab.github.io/>

TECHNICAL PROFILE

Backend Software Engineer specialising in fault-tolerant, scalable systems — async ingestion pipelines, idempotent transaction processing, RBAC-secured REST APIs, and LLM integration with deterministic outputs. Bridges systems architecture with financial domain logic for FinTech, Big Tech, and AI-first product companies.

TECHNICAL SKILLS

Languages

Java(DSA) · JavaScript (Node.js) · SQL

Databases

MongoDB (Atlas) · MySQL · Aggregation Pipelines · Indexing · Bulk Writes

AI / LLM

LLM API Integration · Prompt Engineering · Deterministic AI Outputs · Structured JSON

FinTech Domain

Payments Reconciliation · Portfolio Data Management · Financial Reporting Automation

Backend & APIs

Node.js · Express.js · RESTful API Design · JWT Auth · RBAC · Power Automate

Infrastructure

Docker · Redis · BullMQ · Git · AWS

Systems Design

Idempotency · Race Condition Mitigation · Async Pipelines · Fault Tolerance · Scalability

CS Fundamentals

DSA · OOP · DBMS · OS · Computer Networks

TECHNICAL PROJECTS (2024–2026)

Payments Reconciliation System · Node.js | Express | MongoDB Atlas | Docker | RBAC | JWT

[github.com/rithwikab/Backend_Projects/tree/final-docker/payments-reconciliation](#)

Production-grade reconciliation engine — 25K+ records, ~1.2s avg latency, zero failures under 25-user concurrent load.

- Engineered async ingestion pipeline decoupling file uploads from processing, eliminating blocking I/O under bulk loads (10K+ records).
- Implemented idempotent ingestion via batch hashing & deduplication — zero duplicate financial entries under concurrent submission.
- Built aggregation-based many-to-one transaction-to-invoice reconciliation with partial failure handling for unordered bulk writes.
- Developed RBAC-secured REST APIs (JWT) with Admin / Operations / Analyst role-level access; containerised via Docker with MongoDB Atlas.
- Architected audit logging and batch tracking subsystem enabling end-to-end traceability and failure diagnostics across reconciliation runs.

HR-JIRA Task Management System · Node.js | Express | MongoDB | LLM Integration

[github.com/rithwikab/Backend_Projects/tree/main/HR_JIRA](#)

- Built scalable role-based task platform (HR / Manager / Employee) with JWT auth and full ticket lifecycle via RESTful API design.
- Integrated an LLM-powered classification module to automate priority assignment and routing based on dynamic, user-generated ticketing behavior.
- Architected fault-tolerant integration with OpenAI APIs using structured JSON schema enforcement, implementing asynchronous fallback mechanisms to guarantee zero core-system disruption during upstream API outages.

EDUCATION

B. Tech, Computer Science & Engineering

2019-2023

Keshav Memorial Institute of Technology, Hyderabad · CGPA: 8.66 / 10 — College Topper

Common Aptitude Test (CAT)

2023-2024

Secured 94.84 percentile nationally

Post-Graduate Diploma, Business Analytics and Finance

2024-2026

Institute of Public Enterprise, Hyderabad · 87.71% — Top Performer | Scholarship for Advanced Quantitative Rigor

SOFTWARE ENGINEERING EXPERIENCE

Customer Experience Maker Intern (CXM) (Pre-Placement Offer) · Adobe India

Jun 2022 – Aug 2022

Stack: REST APIs · Power Automate · Power BI · Excel · System Integration

- **Reduced client onboarding time by ~95%** (multi-day → 1 hour) by engineering automated REST API + Power Automate integration pipelines.
- Processed and validated 10,000+ records across heterogeneous systems; built real-time Power BI dashboards for cross-functional stakeholders.
- Received Pre-Placement Offer for demonstrated technical impact in API integration and workflow automation.

ANALYTICS & SYSTEMS EXPERIENCE

Portfolio Management Intern · Oxane Partners

Jan 2025 – May 2025

Stack: SQL · VBA · Excel · Financial Data Engineering

- Collaborated with finance and engineering stakeholders to monitor, test, and validate data consistency for commercial real estate debt portfolios spanning 70+ institutional mandates.
- Built automated data validation pipelines using Excel and VBA script modules to cross-check raw report data, ensuring downstream reporting mirrored the core platform's SQL logic.
- Standardized reporting workflows for corporate debt portfolios, eliminating manual reconciliation bottlenecks and accelerating data integrity checks.
